

Who Needs OnlyMyEmail?

OnlyMyEmail offers email security services to companies and organizations of all sizes that are concerned with spam's impact on both employee productivity and also the escalating IT costs associated with spam and virus email attacks.

What sets OnlyMyEmail apart from other solutions is the simplicity of our implementation, the ease of end-user interaction and above all, our unparalleled filtering accuracy:

- ◆ Personal email filtering verified by both **PC Magazine** and **PC World** at **99.6%**
- ◆ MX-Defender Spam Capture Rate of **99.9993%** verified by **Virus Bulletin's** - VBSpam Competition

The Problem With Spam Filters

While there are dozens of competing solutions available, you'll find most suffer from serious drawbacks, including:

- ◆ Significant False-Positive rates resulting in lost business leads and damaging client relationships
- ◆ Initial installation and configuration, followed by ongoing maintenance, updates, patches and upgrades
- ◆ Decreased network performance due to the CPU and system load required to filter inbound email
- ◆ Potential delays and other inconveniences for legitimate email senders
- ◆ Increased demands on IT staff for managing filtering rules and responding to end-user requests

In addition to these limitations, most spam filters do a mediocre job of blocking junk email. Marketing claims aside, real world testing often produces capture rates no better than 98% to 99%.

What Makes Us Different

Because all filtering runs on OnlyMyEmail's servers there's nothing to purchase, download, install, configure, maintain or upgrade. The value of OnlyMyEmail's Software as a Service (SaaS) spam filtering includes:

- ◆ No software or hardware conflicts or restrictions
- ◆ Filtering rules are never out of date and are updated in real-time
- ◆ 90% to 95% reduction in email bandwidth, hard drive storage and archival costs and requirements
- ◆ Intuitive interaction design - no IT staff or end-user training
- ◆ Equal protection for servers, PCs and mobile devices
- ◆ End-users may review & resend blocked emails, report spam and modify their own preferences

The MX-Defender also includes email monitoring systems that can not only save your IT staff time, but may replace outside services you are already be paying for:

- ◆ Automated mail server warnings and alerts
- ◆ Backup email spooling that will accept and hold your messages if your email servers are unreachable
- ◆ Automatically delivers spooled messages as soon as your mail-servers are back online

99.9993% Capture Rate

19 spam filters competed in the latest Virus Bulletin VBSpam test.

OnlyMyEmail beat them all with a record capture rate, missing only 2 out of 291,304 junk emails.

Proof that nobody stops more spam than OnlyMyEmail.

Meaningful User Preferences

Most anti-spam services offer simple filtering options such as: High, Medium and Low. While conceptually valid, such labeling of email does not substantially help real-world users, and often confuses them instead.

By contrast, OnlyMyEmail enables its clients to filter based on useful and well-defined categories such as: Spam, Direct Marketing, Newsletters, List-Servers and others. Clients can also block email from foreign domains, enable virus filtering and even block those endless “virus alerts” that are nearly as disruptive as the actual viruses themselves.

Even more accuracy is gained as the system continually learns and adapts to each user's feedback through the reporting of spam and/or end user's retrieval of false-positive messages. System learning is automated and adjustments are made in real time as our 100% proprietary filtering system adapts to each user's specific preferences; allowing for multiple emails to be blocked or delivered on a per-user decision basis. With essentially no administration or effort, the OnlyMyEmail system can provide absolute precision in managing both desired and unwanted email.

How Important is Your Email?

If email is a mission-critical system for your business, then you need a spam solution designed for business. OnlyMyEmail provides industrial strength services that will ensure delivery of legitimate business correspondence while eliminating more junk email than any competitor. Having been designed for business users, OnlyMyEmail:

- ◆ Reduces email traffic load and disk storage requirements on your servers by an average of 94%
- ◆ Provides centralized account administration
- ◆ Includes protection for Directory Harvest and Dictionary attacks
- ◆ Can alert your IT staff if your mail servers stop accepting inbound messages
- ◆ Serves as a backup email system when your systems are off line or unreachable
- ◆ Stops email distributed viruses before they reach your users

With a typical cost structure as low as **\$1 per mailbox** for even modest size companies, (and less for larger enterprises) any business will quickly realize that this minimal cost will more than pay for itself in:

- ◆ Recaptured time and productivity gained by both employees and IT staff
- ◆ Extended upgrade cycles for existing servers due to load reduction
- ◆ Email Virus prevention and the reduction in resulting disaster recovery expenses
- ◆ Robust Business Email Hosting is also available as an additional service

There's No Substitute for Experience

Every spam filter *claims* to provide outstanding results. The only way to really find out how well the OnlyMyEmail system works is to simply try it yourself. We will gladly provide a risk free trial for 30 days without cost or obligation and then let the results speak for themselves.

Try It Now
30 Day Trial
